ALLOW US TO CLEAR THE AIR.**

Are dirty air ducts harming your health?

Chances are you don't give much thought to your home's air ducts or what may be lurking behind the vent covers. However, dirty ducts may be negatively affecting your health.

U.S. Environmental Protection Agency (EPA) studies have found that indoor air may be two to five times—and occasionally more than 100 times—more polluted than outdoor air. Indoor air pollutants can cause immediate and long-term health problems. Considering that the average American spends 90% of their time indoors, improving indoor air quality is vital.

One way to improve a home's indoor air quality is to keep the air ducts clean.

In addition to improving air quality, air duct cleaning also results in energy savings. Pollutants collect and clog the heat exchanger, evaporation coil and duct in the HVAC system, making it work harder to heat and cool the home. Removing pollutants allows the HVAC system to work more efficiently.

BENEFITS OF AIR DUCT CLEANING BY SERVICEMASTER CLEAN®:

- Improves indoor air quality
- Saves energy costs
- Reduces the potential for mold growth

- Extends HVAC equipment life
- Provides a healthier environment for allergy sufferers
- Removes unpleasant odors

A Name You Can Trust.

For more than 60 years, ServiceMaster Clean® has offered cleaning services to homeowners across the country. We have staked our reputation on our high-performing products and world-class service. Today, thousands of homeowners worldwide depend on ServiceMaster Clean to provide the clean you expect and the service you deserve.
